**(54) Title:** AN ARRANGEMENT FOR SCREENING-OFF A SPACE

**(57) Abstract:** The invention relates to an arrangement (10) for screening-off a first space from a second space and for preventing liquid from splashing outside the first space, comprising a liquid-repellent element displaceable between a first position screening-off the first space and an open second position. The liquid-repellent element includes a plurality of elongate slats (11) mutually interconnected by the intermediary of at least one ladder (14) and with a first side (12), a second side (13), a first longitudinal side (18) and a second longitudinal side (19), the slats (11) being, by the intermediary of at least one operating element (15), displaceable in a vertical direction between the screening-off first position and the open second position. The first side (12) of each respective slat (11) is designed with at least one projecting portion (17), the projecting portion (17) being designed for abutment against the second side (13) of an adjacent slat (11) in the open, second position while forming at least one air gap (21) between adjacent slats (11).

SK, TR), OAPI (BF, BJ, CF, CG, CI, CM, GA, GN, GQ, GW, ML, MR, NE, SN, TD, TG).
